DESCRIPTION

PYRROLOPYRIMIDINE AND PYRROLOPYRIDINE DERIVATIVES
SUBSTITUTED WITH CYCLIC AMINO GROUP

5

[DETAILED DESCRIPTION OF THE INVENTION]

[TECHNICAL FIELD]

The present invention relates to a therapeutic agent for diseases in which
10 corticotropin releasing factor (CRF) is considered to be involved, such as depression,
anxiety, Alzheimer's disease, Parkinson's disease, Huntington's chorea, eating disorder,
hypertension, gastral diseases, drug dependence, cerebral infarction, cerebral ischemia,
cerebral edema, cephalic external wound, inflammation immunity-related diseases,
alopecia, irritable bowel syndrome, sleep disorders, epilepsy, dermatitides, schizophrenia,
15 etc.

[DESCRIPTION OF THE PRIOR ART]

CRF is a hormone comprising 41 amino acids (Science, 213, 1394-1397, 1981;
and J. Neurosci., 7, 88-100, 1987), and it is suggested that CRF plays a core role in
20 biological reactions against stresses (Cell. Mol. Neurobiol., 14, 579-588, 1994;
Endocrinol., 132, 723-728, 1994; and Neuroendocrinol. 61, 445-452, 1995). For CRF,
there are the following two paths: a path by which CRF acts on peripheral immune
system or sympathetic nervous system through hypothalamus-pituitary-adrenal system,
and a path by which CRF functions as a neurotransmitter in central nervous system (in
25 Corticotropin Releasing Factor: Basic and Clinical Studies of a Neuropeptide, pp. 29-52,
1990). Intraventricular administration of CRF to hypophysectomized rats and normal
rats causes an anxiety-like symptom in both types of rats (Pharmacol. Rev., 43, 425-473,
1991; and Brain Res. Rev., 15, 71-100, 1990). That is, there are suggested the

participation of CRF in hypothalamus-pituitary-adrenal system and the pathway by which CRF functions as a neurotransmitter in central nervous system.

The review by Owens and Nemeroff in 1991 summarizes diseases in which CRF is involved (Pharmacol. Rev., 43, 425-474, 1991). That is, CRF is involved in
5 depression, anxiety, Alzheimer's disease, Parkinson's disease, Huntington's chorea, eating disorder, hypertension, gastrointestinal diseases, drug dependence, inflammation, immunity-related diseases, etc. It has recently been reported that CRF is involved also in epilepsy, cerebral infarction, cerebral ischemia, cerebral edema, and cephalic external wound (Brain Res. 545, 339-342, 1991; Ann. Neurol. 31, 48-498, 1992; Dev. Brain Res.
10 91, 245-251, 1996; and Brain Res. 744, 166-170, 1997). Accordingly, antagonists against CRF receptors are useful as therapeutic agents for the diseases described above.

WO02/002549 and WO00/053604 disclose pyrrolopyridine and pyrrolopyrimidine derivatives respectively as CRF receptor antagonists. Bloorganic & Medicinal Chemistry 10 (2002) 175-183 also discloses pyrrolopyrimidine derivatives.
15 However, none disclose the compounds provided in the present invention.

[PROBLEM(S) TO BE SOLVED BY INVENTION]

An object of the present invention is to provide an antagonist against CRF receptors which is effective as a therapeutic or prophylactic agent for diseases in which
20 CRF is considered to be involved, such as depression, anxiety, Alzheimer's disease, Parkinson's disease, Huntington's chorea, eating disorder, hypertension, gastral diseases, drug dependence, epilepsy, cerebral infarction, cerebral ischemia, cerebral edema, cephalic external wound, inflammation, immunity-related diseases, alpecia, irritable bowel syndrome, sleep disorders, epilepsy, dermatitides, schizophrenia, etc.
